

10) Name: allocation to point source, sluices

Description

This allocation is used for emissions from zinc anodes on sluice gates and is based on historic emissions. Locations and emissions originate from a study by the former Institute for Inland Water Management and Waste Water Treatment RIZA (now Directorate for Public Works and Water Management - Water Service and Deltares).

Example map 10: zinc emissions, anodes on sluice gates

Institutes involved

RIZA

Currency of distribution basis data

Data are for 1995 (approximately).

Background documentation

Emission estimate for diffuse sources

Sacrificial anodes on sluice valves

Netherlands Emission Inventory in cooperation with Deltares and TNO (2008)
